

SUPERSTORE SALES ANALYSIS

By: Shahana Anjum

about me

- Computer Engineer, with a focus on data analysis and financial modelling.
- Skilled in Excel, data visualization, and financial reporting.
- Passionate about understanding market behavior through statistical techniques
- Currently exploring the intersection of finance, analytics, and decision making

INTRODUCTION

- The objective of this project is to analyze:
 - Utilize Tableau to explore, analyze, and visualize the Superstore dataset.
 - Develop interactive dashboards to compare key business metrics across different regions.
 - Identify trends, patterns, and insights in sales, profit, customer behavior, and product performance.
 - Analyze sales and profit trends
 - Identify areas of concern and opportunities
 - Provide actionable recommendations using Tableau dashboards

This analysis will enable decision-makers to make informed, region-specific actions to drive growth and improve the overall efficiency of sales operations

DATASET EXPLORATION AND PREPARATION

The analysis is based on the Superstore dataset, a widely used retail dataset that captures detailed sales transactions and customer interactions over time. It includes information from 2014 to 2018, covering various business dimensions.

- There are 24 fields
- Total Records: 9994
- Geography: Sales across four regions – West, East, Central, and South
- KPI: Customer names, IDs, and regional segmentation
- Order Information: Order ID, Order Date, Ship Date, Quantity, Discount, and Sales
- Product Detail: Product Name, Category (Furniture, Office Supplies, Technology), Sub-Category.

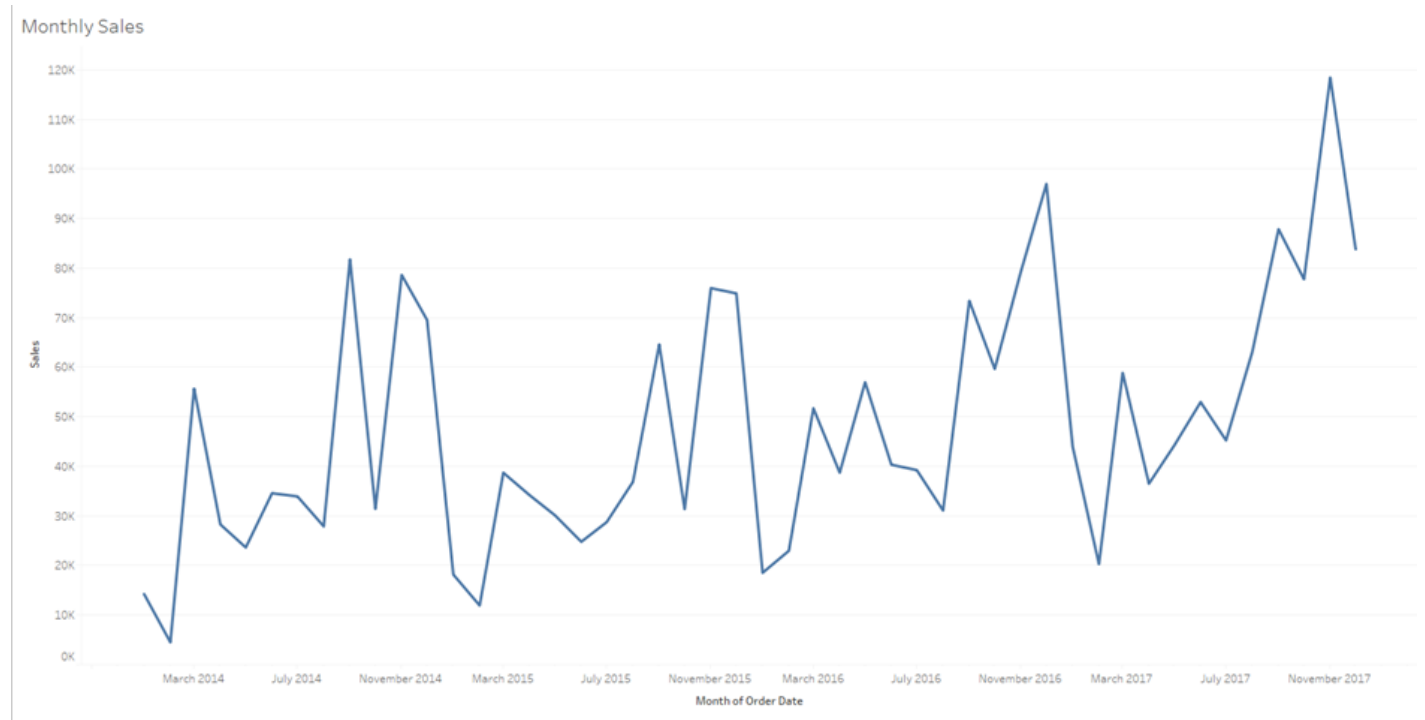

BASIC VISUALIZATIONS: SALES BY REGION

- The analysis shows that the west region have highest sales of more than 72k
- The south region sales are lower than 40k.
- Improvements are required for the south and central region. There is a need for regional marketing strategy.

BASIC VISUALIZATIONS: MONTHLY SALES TREND

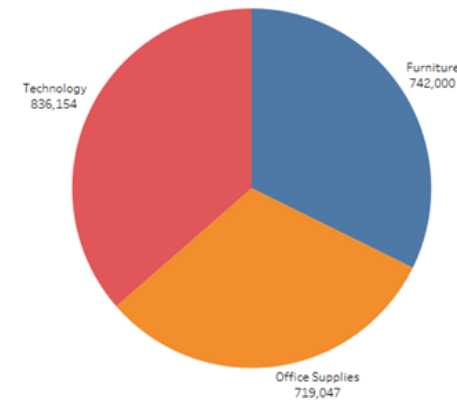

- There is a strong seasonality sales
- Peak sales observed in November and December.
- There is an opportunity to run holiday focused promotions to increase the sales.

BASIC VISUALIZATIONS: SALES BY PRODUCT CATEGORY

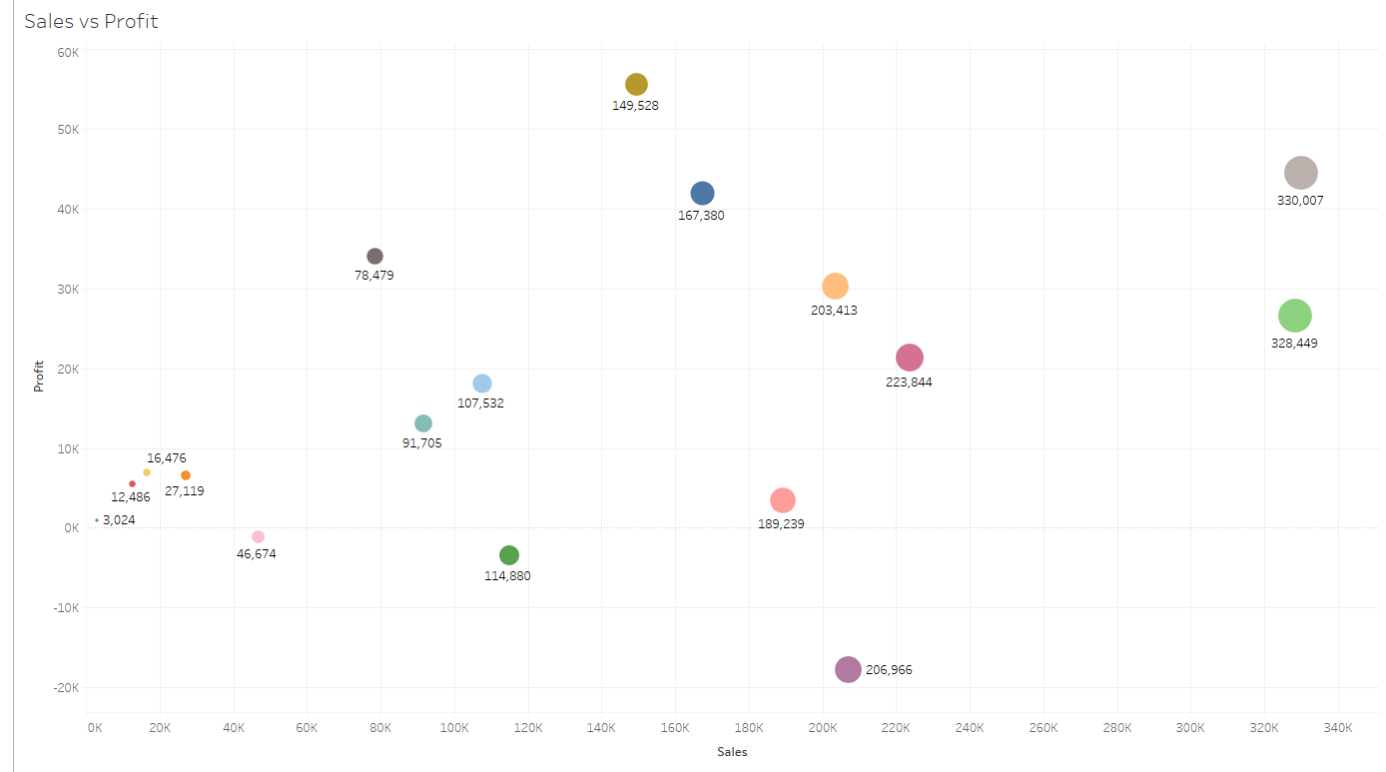

Sales by product category

- The trend shows that the sales for technology are highest than furniture and other supplies.
- Technology product are the most preferred one which can help tech industry to grow.
- Promotions required for other supplies products so to increase their sales

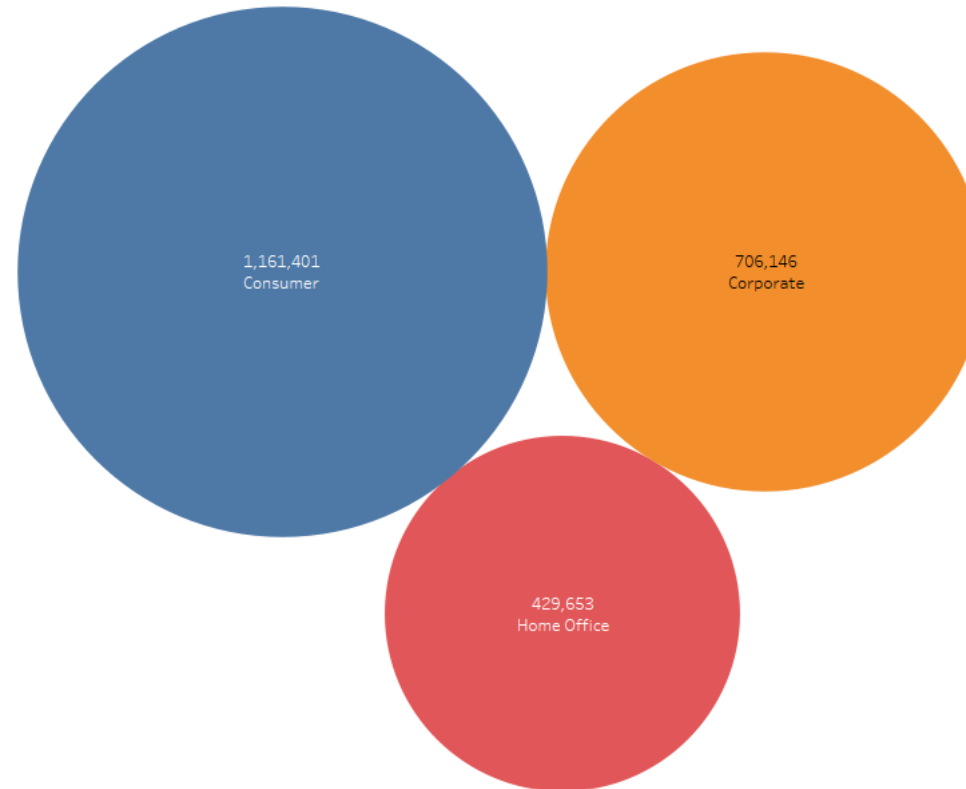

ADVANCE VISUALIZATION: SALSE VS PROFIT

- The trend shows that the highest sales does not always have high profit.
- Furniture category shows some negative profit despite decent sales
- Technology category balances sales and profit.

ADVANCE VISUALIZATION: CUSTOMER SEGMENT

Customer Segment

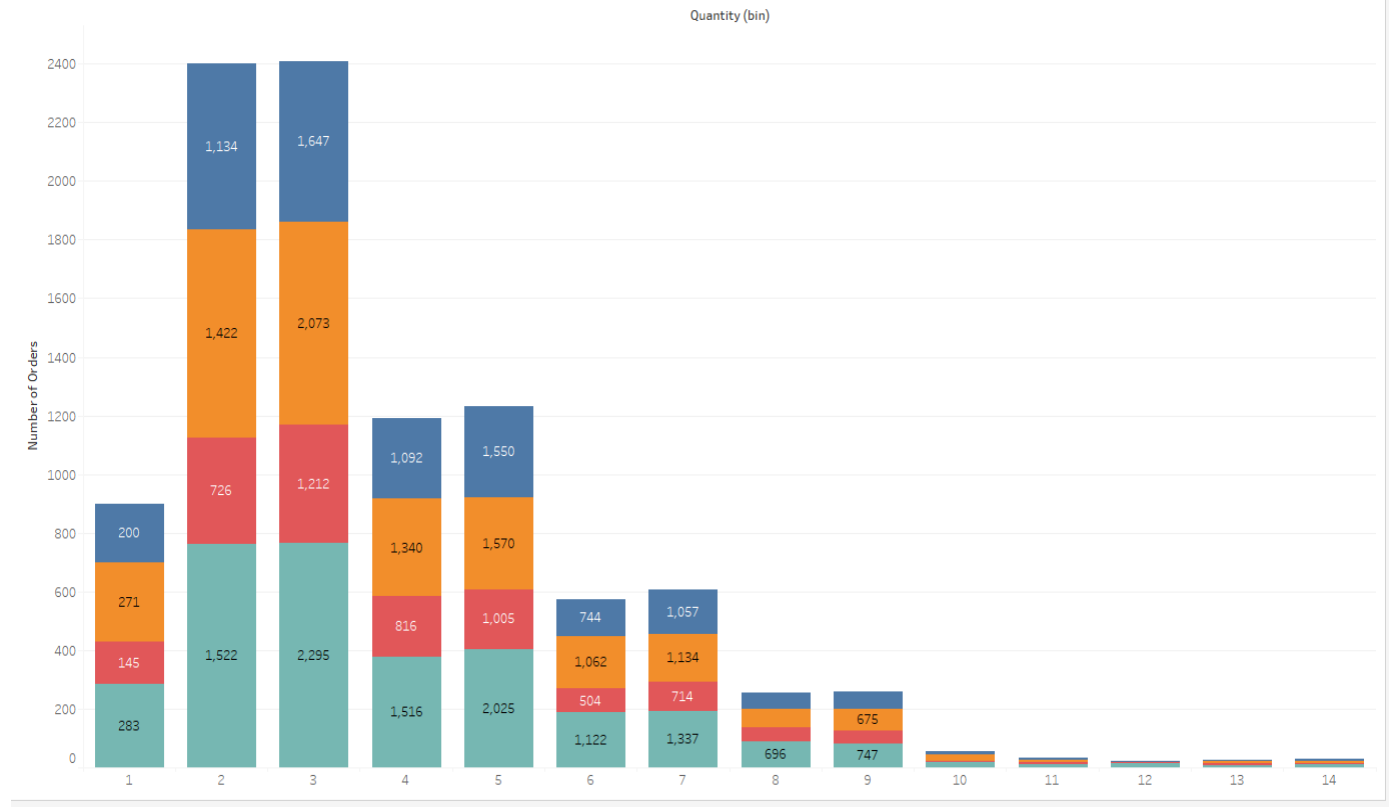

- Corporate/home office segment shows highest profit margin
- Consumer segment identifies sales volume.
- Home office segment has lower sale which means that the prefer working environment are in the office.
- Segment specific campaigns/promotions are required.

ADVANCE VISUALIZATION: ORDER QUANTITY DISTRIBUTION

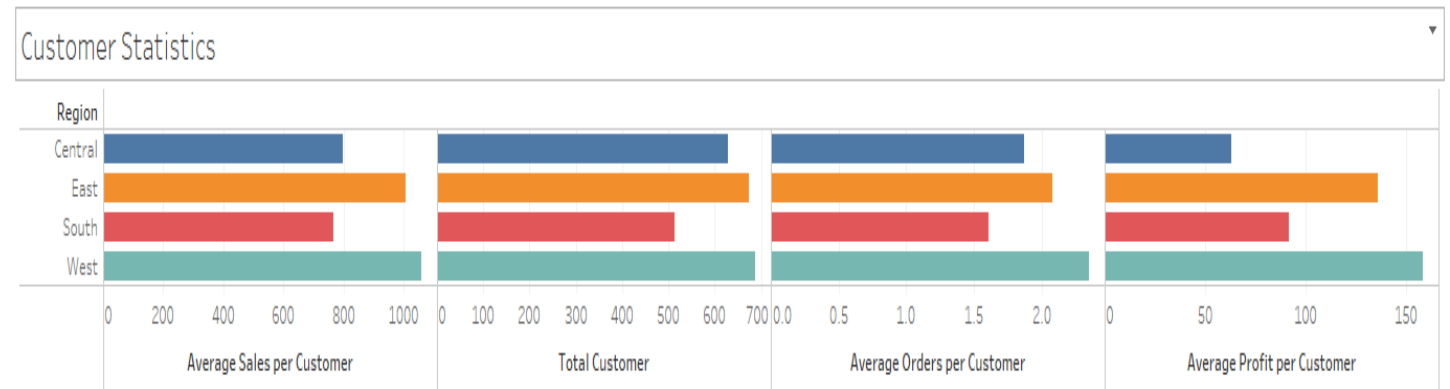

- Bins 2 and 3 are the most frequent, each with total orders reaching nearly 2400.
- The distribution is right-skewed as most orders are placed in small quantities, with very few large-quantity orders.
- Marketing and pricing strategies could target customers more likely to order in bins 2–5

Order Quantity Distribution

ADVANCE VISUALIZATION: CUSTOMER STATISTICS

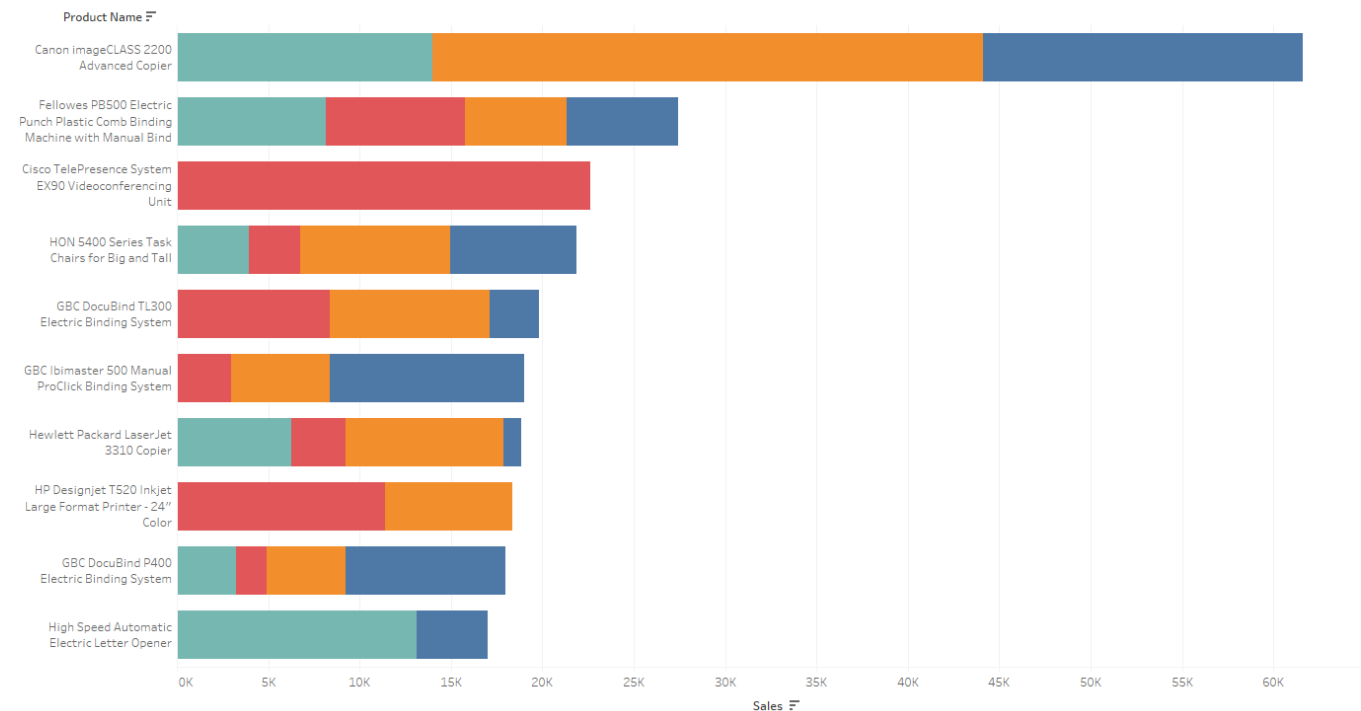

- West region leads with the highest average sales.
- East follows, slightly above Central.
- South has the lowest average sales per customer.
- Focus marketing and resource allocation on West and East for maximum ROI.

SALES PERFORMANCE SUMMARY: TOP 10 PERFORMING PRODUCT

- Canon image CLASS 2200 Advanced Copier dominates with sales exceeding 60K, more than double any other product.
- Fellowes PB500 Electric Punch Binding Machine and Cisco Tele Presence System EX90 also show strong sales.
- Consistent performance across multiple regions suggests broad market appeal for these items, reducing regional risk

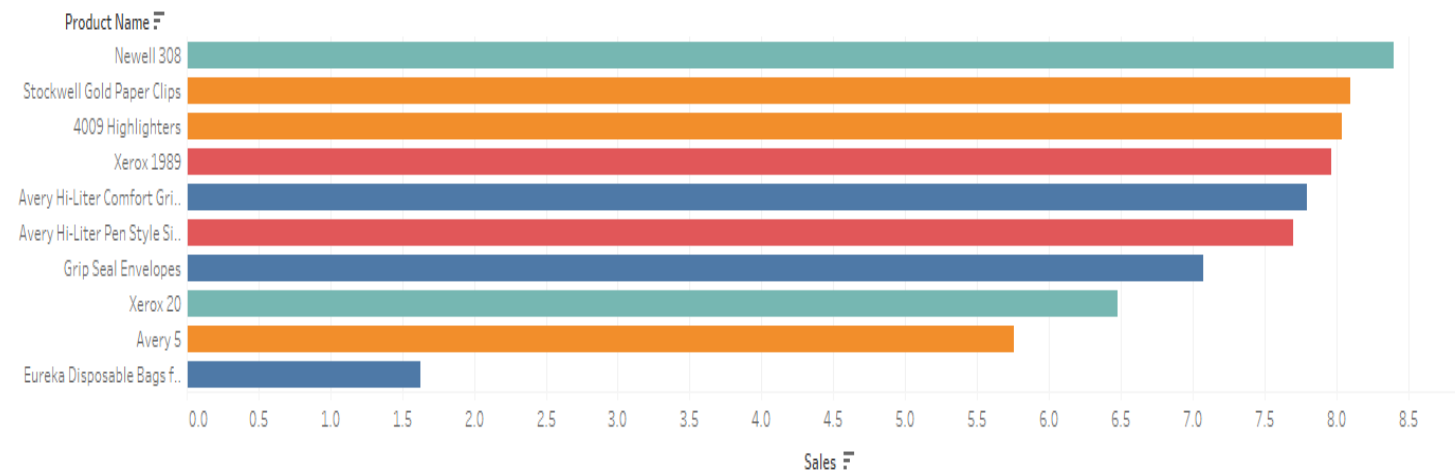

Top 10 Performing Products

SALES PERFORMANCE SUMMARY: BOTTOM 10 PERFORMING PRODUCT

- Newell 308 is the least sold product, with sales just under 8.5 units.
- Followed closely by Stockwell Gold Paper Clips and 4009 Highlighters
- Products like Eureka Disposable Bags and Grip Seal Envelopes may have limited demand or be used in very specific use cases.
- Many of these products likely have limited or declining relevance in modern office environments.

Bottom 10 Performing Products

SALES PERFORMANCE SUMMARY: PROFIT BY SUB-CATEGORY

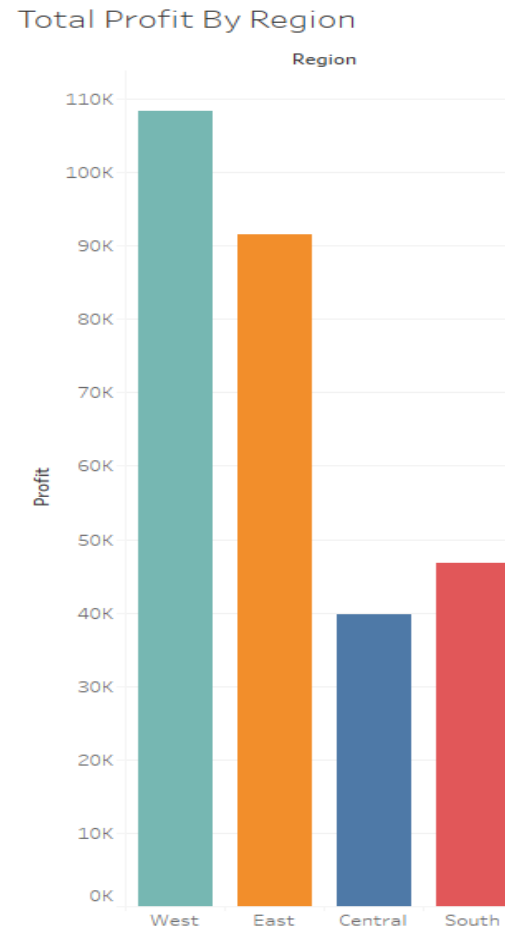

- The trend for Sub-categories like Chairs, Phones, Copiers, and Binders contribute significantly to profit.
- Regionally, South lags across nearly all sub-categories, whereas West and East perform well.

profit by Sub-Category

Sub-Catego..	Region			
	Central	East	South	West
Accessories				
Appliances				
Art				
Binders				
Bookcases				
Chairs				
Copiers				
Envelopes				
Fasteners				
Furnishings				
Labels				
Machines				
Paper				
Phones				
Storage				
Supplies				
Tables				

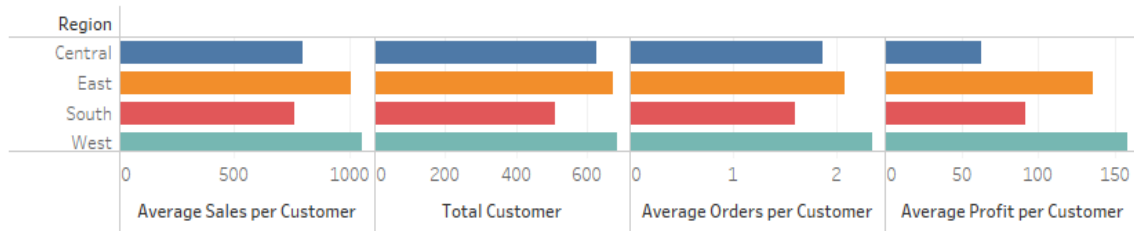

SALES PERFORMANCE SUMMARY: TOTAL PROFIT BY REGION

West and East region has highest profit.
Central and south has lower profit.

DASHBOARD

KPI Dashboard Summary

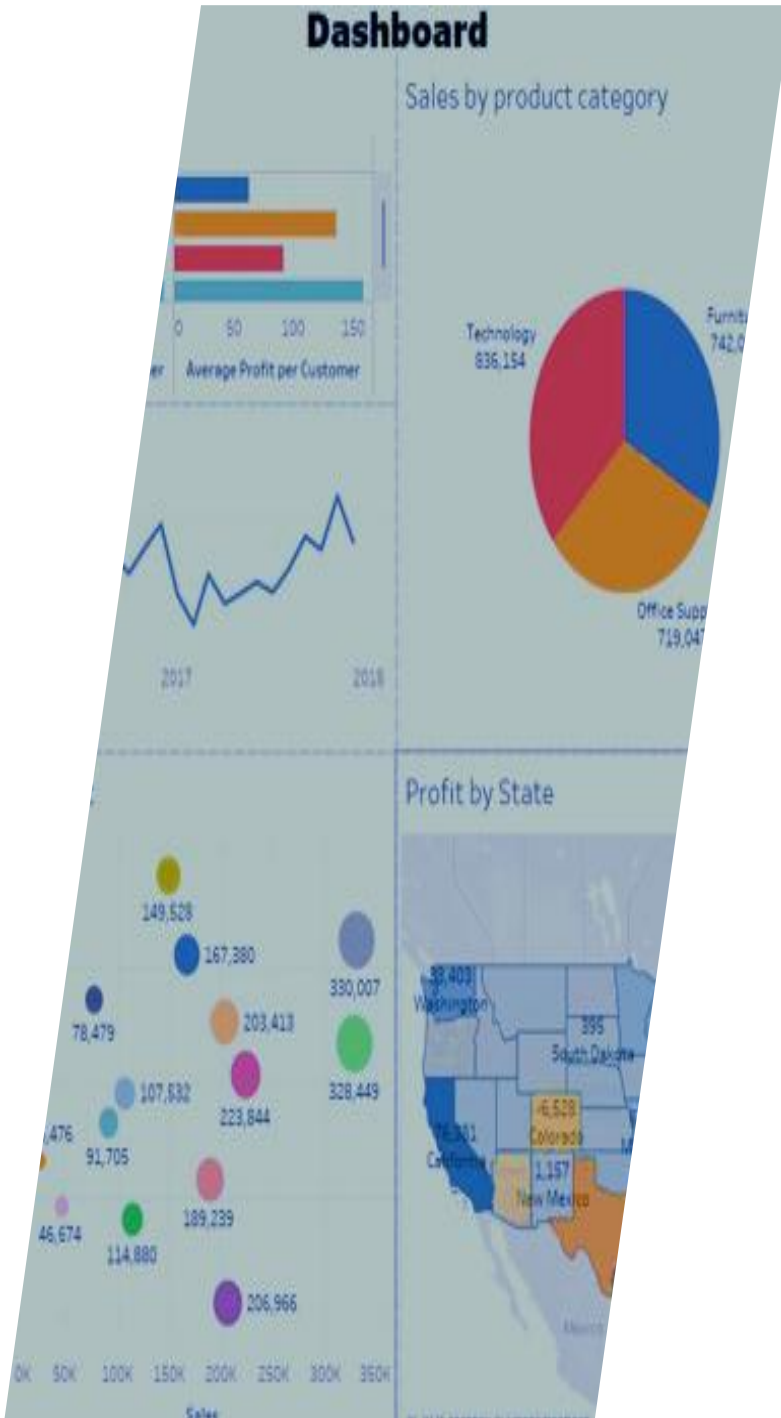

- Total Sales, Total Profit, Average Order Value
- KPIs provide a snapshot of business performance
- Useful for tracking success over time

Interactive Dashboard

- Combines Sales by Region, Monthly Trend, and Profit Analysis
- Filters allow dynamic updates by Region and Category
- Enables flexible, data-driven decision-making

Recommendations

- Reassess low-profit product lines
- Increase investment in Central region
- Leverage seasonal sales spikes
- Focus on profitable customer segments

DASHBOARD

Strategic Value of Dashboards

- Real-time performance tracking
- Support informed decision-making
- Help optimize marketing, pricing, and inventory strategies

ANALYSIS AND REPORTING

Superstore sales analysis is carried out in this project using superstore dataset. The analysis is analyzed using Tableau. The insights and interactive dashboards were detailed in previous slides and a summary is shown below:

- West region has the highest average sales and profit per customer, along with strong customer count.
- South shows the lowest performance across all customer metrics: sales, orders, and profit per customer.
- Sales are steadily increasing from 2014 to 2017
- The trend reflects healthy business growth over time
- Technology is the top-selling category (~\$836K), followed by Furniture and Office Supplies.
- Sub-categories like Chairs, Phones, Copiers, and Binders contribute significantly to profit.
- West leads with the highest profit, followed by East, whereas South and Central are significantly less profitable.

ANALYSIS AND REPORTING

Area of concern:

- South Region: Consistently underperforms in sales, profit, and customer metrics.
- Regional Imbalance: Profit is concentrated in a few states; many others underperform or incur losses.
- Product Sub-Categories: Certain high-sales items like Tables are not profitable.

Any opportunities:

- Technology Category: High sales and likely high margin — continue to invest in this product line.
- Top States (CA, NY, WA): These could be leveraged as growth hubs or test markets
- South Region Revitalization: Requires targeted campaigns, adjusted pricing, or operational review

CONCLUSION

The analysis of the Superstore dataset through interactive Tableau dashboards has provided valuable insights into the company's regional and product-level performance.

Key trends reveal that:

- Visual insights help reveal business strengths and weaknesses
- Dashboards provide strategic value
- These insights support the company's goal of expanding regionally by identifying high-performing markets, underutilized opportunities, and product lines requiring strategic attention
